

FLUKE-SOLVE®

EFFECTIVE TREATMENT FOR SKIN AND GILL FLUKES EVEN AT LOW TEMPERATURES, IN FRESHWATER AND MARINE SYSTEMS.

Fluke-Solve® successfully treats skin and gill flukes (Monogenean species), eye flukes (Diplostomum species) and intestinal tapeworms by immersion, and can be used in a wide range of fish. It is suitable for both freshwater and marine systems, including in the presence of salt when added as a therapeutic, and is even effective from temperatures as low as 3°C. Fluke-Solve® is safe with biofilters and plants, as well as shrimp, snails and frogs, and can also be used to treat parasites on shrimp.

The only product in the market to rapidly dissolve, this specially developed formula avoids bubbles occurring in the water and as a result causing further stress to the fish. Fluke-Solve® is a fast-acting treatment that remains active for up to 3 weeks, after which a second treatment is advised in order to eliminate any newly hatched larvae, breaking the cycle of infection.

- Unique, rapidly dissolving 50% Praziquantel
- Doesn't affect bacterial filters or plants
- Effective at temperatures as low as 3°C
- UV can be left on during treatment

INSTRUCTIONS FOR USE: Use at a rate of 4g powder per 1000 litres of water. First add the required quantity of Fluke-Solve® powder to 10 litres of pond water in a clean container and stir. Immediately add this stock solution to the pond water with the fish. Rinse out the container with pond water and add to the pond. If necessary a separate tank can be used to immerse the fish for the treatment period of at least 24 hours. In the case of egg-laying flukes, a second treatment 3 weeks later after the initial one is recommended to ensure that the hatching larvae are killed.

WARNINGS, STORAGE: Do not use at the same time as any other treatment. For use in fish in closed water systems. Store in a cool dry place. If it is impossible to use all of the contents once the packet has been opened keep in the original sachet and reseal after use - the contents will keep until the expiry date on the packet. Dispose of any unused product according to Local Authority requirements. For Animal treatment only. Keep out of reach of children.

AVAILABLE IN: 10g, 50g, 100g

THIS VETERINARY MEDICINE IS MARKETING IN ACCORDANCE WITH THE EXEMPTION FOR SMALL PET ANIMALS.

FISH CARE

EXPERT FORMULATIONS TO IMPROVE THE HEALTH OF POND AND AQUARIUM FISH

Vetark offer a range of fish products for pet owners and professionals including parasite treatments, anaesthesia, disinfectants, and wound cleansers. Suitable for both pond and aquarium fish in freshwater and marine systems, our products are crucial for maintaining fish and pond / tank health and to stop the spread of bacteria and infections.

FLUKE-SOLVE PLUS AVAILABLE IN: 10g, 50g, 100g for Koi Carp only

Fluke-Solve@Plus contains Praziquantel 50%, Nitroscanate 1% and Emamectin benzoate 1.4% for administration by bath/immersion route. Fluke-Solve@Plus has been specially developed to target resistant flukes in Koi Carp. It can be used for the treatment of tapeworms as well as skin and gill flukes. Fluke-Solve@Plus can be used in a pond without affecting either the bacterial filters or the plants and it is effective at temperatures from 3°C. Suitable for use in the presence of salt.

INSTRUCTIONS FOR USE: Use at a rate of 4g powder per 1000 litres of water. First add the required quantity of Fluke-Solve@Plus powder to about 10 litres of pond water in a clean container and stir. Immediately add this stock solution to the pond water with the fish present. Rinse out the container with pond water and add to the pond. If necessary a separate tank can be used to immerse the fish for a treatment period of 48 hours. When adding the product to the pond or tank the water will turn cloudy which shows the product rapidly dispersing through the water. This is normal and will clear in about 48 hours. In the case of egg-laying flukes, a second treatment 3 weeks after the initial one is recommended to ensure all the hatching larvae are eliminated.

AQUA-SED AVAILABLE IN: 250ml

Aqua-sed contains the active ingredient 2-phenoxyethanol for anaesthetising fish for purposes such as surgery, microchipping and vaccinations. At 4x the normal dose, Aqua-sed can also be used to humanely euthanise seriously ill or injured fish.

LICE-SOLVE AVAILABLE IN: 10g, 50g, 100g

A specially developed, unique rapidly dissolving formulation containing 1.4% emamectin. Lice-Solve successfully treats parasites such as Argulus (fish lice) species, Ergasilus (gill maggot), and Lerneia (anchor worm) and can be used in a wide range of fish. It is suitable for use in freshwater and marine systems and is simple to use and administer.

TAMODINE WOUND AVAILABLE IN: 50ml, 100ml

A veterinary wound and skin cleanser, Tamodine Wound is ideal for cleansing and dressing wounds and infected areas in conjunction with veterinary treatment. It is a powerful antifungal and antibacterial tamed iodine veterinary medicine.

The following products fall under the exemption for small pet animals: Fluke-Solve Plus, Aqua-Sed, Lice-Solve and Tamodine Wound
